

BITS Composition

- Cold formed
- S2 special steel for optimal hardness and elasticity
- Good torque transmission
- Optimal positive seating in DIN screws
- Grooved for fixing into a holder
- Suited for all screw applications for manual and machine usage
- Precision finished according to DIN/ISO

- Turned and precision milled
- S2 special steel for optimal hardness and elasticity
- Highest torque transmission
- Optimal positive seating in DIN screws
- With color coding for quick identification of the suitable profile
- Grooved for fixing into a holder
- Suited for all screw applications for manual and machine usage
- Precision finished according to DIN/ISO

Surfaces

Sand blasted

- Fine surface without coating
- Sandblasted tools must be oiled

Nickel plated

- The chrome layer is manufactured by electroplating in a electro bath process
- There are several steps that are passed through
- Nickel offers a very good corrosion protection and is resistant against air, water, diluted acids and most treatments of alkaline solution.
- The light gold optics are typical

Matt chrome

- The chrome layer is manufactured by electroplating in a electro bath process
- There are several steps, e.g. degrease / nickel plating and chrome plating
- Matt = matt nickel layer shines through chrome layer resulting in matt finish
- Ideal corrosion and wear and tear protection

Inox stainless steel

- For stainless steel elements or stainless steel screws
- Tools made from conventional steel manufacturing tools leave behind abrasion and sometimes traces of rust. Optical damage - is the consequence of engineering damage.
- The tools are suitable for workshop usage are hardened and have the necessary strength.
- Are not made of 100% stainless steel therefore slightly magnetic
- Storage should be separated from standard tools

Phosphate

- Phosphating = chemical /electro-chemical process
- Dip coating or spraying method
- Intention is the generation of phosphate layer, which is immovable on the base metal
- The surface receives therefore a very good absorption capacity for oil and wax.
- Reliable corrosion protection
- To be bound to phosphated tools when oiled

Bit profile

CLASSIC

- Surface sand-blasted, phosphate or nickel plated
- Manufactured from S2 special steel
- Cold formed
- Precision finished according to DIN/ISO

CHROME^{plus}

- Turned and precision milled
- Manufactured from S2 special steel
- With colour coding
- Precision finished according to DIN/ISO

INOX^{plus}

- Manufactured Inox S2 special steel
- Cold formed
- Specially for working with stainless steel components
- Precision finished according to DIN/ISO

MICRO

- Surface nickel-plated
- Manufactured from S2 special steel
- Cold formed
- Extra short execution
- Precision finished according to DIN/ISO

Bit holder

- Quick and direct bit adaptor
- Practical pocket sized
- Large selection at 4 different assortments
- Ideal for work on assembly lines and frameworks
- Spring loaded design

BIT HOLDERS

Magnetic bit holder

- DIN 7427
- Magnetic
- For 1/4" Bits with external hexagon drive to DIN 3126 / ISO 1173 - C 6,3
- Can be used by hand, electric screwdriver and drills
- Ideally suited for fittings in trade and industry
- Special steel
